KAREN J. WARREN

The Power and the Promise of Ecological Feminism

Ecological feminism is the position that there are important connections—historical, experiential, symbolic, theoretical—between the domination of women and the domination of nature, an understanding of which is crucial to both feminism and environmental ethics. I argue that the promise and power of ecological feminism is that it provides a distinctive framework both for preconceiving feminism and for developing an environmental ethic which takes seriously connections between the domination of women and the domination of nature.

Feminism, Ecological Feminism, and Conceptual Frameworks

For ecofeminism, that a logic of domination is explanatorily basic is important for at least three reasons. First, without a logic of domination, a description of similarities and differences would be just that—a description of similarities and differences. Consider the claim, "Humans are different from plants and rocks in that humans can (and plants and rocks cannot) consciously and radically reshape the communities in which they live; humans are similar to plants and rocks in that they are both members of an ecological community." Even if humans are "better" than plants and rocks with respect to the conscious ability of humans to radically transform communities, one does not thereby get any morally relevant distinction between humans and nonhumans, or an argument for the domination of plants and rocks by humans. To get those conclusions one needs to add at least two powerful assumptions, viz., (A2) and (A4) in argument A below:

(A1) Humans do, and plants and rocks do not, have the capacity to consciously and radically change the community in which they live.

(A2) Whatever has the capacity to consciously and radically change the community in which it lives is morally superior to whatever lacks this capacity.

(A3) Thus, humans are morally superior to plants and rocks.

(A4) For any X and Y, if X is morally superior to Y, then X is morally justified in subordinating Y.

(A5) Thus, humans are morally justified in subordinating plants and rocks.

Without the two assumptions that humans are morally superior to (at least some) nonhumans, (A2), and that superiority justifies subordination, (A4), all one has is some difference between humans and some nonhumans. This is true even if that difference is given in terms of superiority. Thus, it is the logic...
of domination, (A4), which is the bottom line in ecofeminist discussions of oppression.

Second, ecofeminists . . . claim that, historically, within at least the dominant Western culture, a patriarchal conceptual framework has sanctioned the following argument B:

(B1) Women are identified with nature and the realm of the physical; men are identified with the “human” and the realm of the mental.

(B2) Whatever is identified with nature and the realm of the physical is inferior to (“below”) whatever is identified with the “human” and the realm of the mental; or, conversely, the latter is superior to (“above”) the former.

(B3) Thus, women are inferior to (“below”) men; or, conversely, men are superior to (“above”) women.

(B4) For any X and Y, if X is superior to Y, then X is justified in subordinating Y.

(B5) Thus, men are justified in subordinating women.

If sound, argument B establishes patriarchy, i.e., the conclusion given at (B5) that the systematic domination of women by men is justified. But according to ecofeminists, (B5) is justified by just those three features of an oppressive conceptual framework identified earlier: value-hierarchical thinking, the assumption at (B2); value dualisms, the assumed dualism of the mental and the physical at (B1) and the assumed inferiority of the physical vis-à-vis the mental at (B2); and a logic of domination, the assumption at (B4), the same as the previous premise (A4). Hence, according to ecofeminists, insofar as an oppressive patriarchal conceptual framework has functioned historically (within at least dominant Western culture) to sanction the twin dominations of women and nature (argument B), both argument B and the patriarchal conceptual framework, from whence it comes, ought to be rejected.

Of course, the preceding does not identify which premises of B are false. What is the status of premises (B1) and (B2)? Most, if not all, feminists claim that (B1), and many ecofeminists claim that (B2), have been assumed or asserted within the dominant Western philosophical and intellectual tradition. As such, these feminists assert, as a matter of historical fact, that the dominant Western philosophical tradition has assumed the truth of (B1) and (B2). Ecofeminists, however, either deny (B2) or do not affirm (B2). Furthermore, because some ecofeminists are anxious to deny any ahistorical identification of women with nature, some ecofeminists deny (B1) when (B1) is used to support anything other than a strictly historical claim about what has been asserted or assumed to be true within patriarchal culture—e.g., when (B1) is used to assert that women properly are identified with the realm of nature and the physical. Thus, from an ecofeminist perspective, (B1) and (B2) are properly viewed as problematic though historically sanctioned claims: they are problematic precisely because of the way they have functioned historically in a patriarchal conceptual framework and culture to sanction the dominations of women and nature.

What all ecofeminists agree about, then, is the way in which the logic of domination has functioned historically within patriarchy to sustain and justify the twin dominations of women and nature. Since all feminists (and not just ecofeminists) oppose patriarchy, the conclusion given at (B5), all feminists (including ecofeminists) must oppose at least the logic of domination, premise (B4), on which argument B rests—whatever the truth-value status of (B1) and (B2) outside of a patriarchal context.

That all feminists must oppose the logic of domination shows the breadth and depth of the ecofeminist critique of B: it is a critique not only of the three assumptions on which this argument for the domination of women and nature rests, viz., the assumptions at (B1), (B2), and (B4); it is also a critique of patriarchal conceptual frameworks generally, i.e., of those oppressive conceptual frameworks which put men “up” and women “down,” allege some way in which women are morally inferior to men, and use that alleged difference to justify the subordination of women by men. Therefore, ecofeminism is necessary to any feminist critique of patriarchy, and, hence, necessary to feminism. . . .

Third, ecofeminism clarifies why the logic of domination, and any conceptual framework which gives rise to it, must be abolished in order both to make possible a meaningful notion of difference which does not breed domination and to prevent feminism from becoming a “support” movement based primarily on shared experiences. In contemporary society, there
Karen J. Warren • The Power and the Promise of Ecological Feminism  125

is no one "woman’s voice," no woman (or human) simpliciter: every woman (or human) is a woman (or human) of some race, class, age, affectional orientation, marital status, regional or national background, and so forth. Because there are no "monolithic experiences" that all women share, feminism must be a "solidarity movement" based on shared beliefs and interests rather than a "unity in sameness" movement based on shared experiences and shared victimization. In the words of Maria Lugones, "Unity—not to be confused with solidarity—is understood as conceptually tied to domination."

Ecofeminists insist that the sort of logic of domination used to justify the domination of humans by gender, racial or ethnic, or class status is also used to justify the domination of nature. Because eliminating a logic of domination is part of a feminist critique—whether a critique of patriarchy, white supremacist culture, or imperialism—ecofeminists insist that naturism is properly viewed as an integral part of any feminist solidarity movement to end sexist oppression and the logic of domination which conceptually grounds it.

Ecofeminism as a Feminist and Environmental Ethic

... [A]n ecofeminist ethic involves a reconceptualization of what it means to be human, and in what human ethical behavior consists. Ecofeminism denies abstract individualism. Humans are who we are in large part by virtue of the historical and social contexts and the relationships we are in, including our relationships with nonhuman nature. Relationships are not something extrinsic to who we are, not an "add on" feature of human nature; they play an essential role in shaping what it is to be human. Relationships of humans to the nonhuman environment are, in part, constitutive of what it is to be a human.

By making visible the interconnections among the dominations of women and nature, ecofeminism shows that both are feminist issues and that explicit acknowledgement of both is vital to any responsible environmental ethic. Feminism must embrace ecological feminism if it is to end the domination of women because the domination of women is tied conceptually and historically to the domination of nature.

A responsible environmental ethic also must embrace feminism. Otherwise, even the seemingly most revolutionary, liberational, and holistic ecological ethic will fail to take seriously the interconnected dominations of nature and women that are so much a part of the historical legacy and conceptual framework that sanctions the exploitation of nonhuman nature. Failure to make visible these interconnected, twin dominations results in an inaccurate account of how it is that nature has been and continues to be dominated and exploited and produces an environmental ethic that lacks the depth necessary to be truly inclusive of the realities of persons who at least in dominant Western culture have been intimately tied with that exploitation, viz., women. Whatever else can be said in favor of such holistic ethics, a failure to make visible ecofeminist insights into the common denominators of the twin oppressions of women and nature is to perpetuate, rather than overcome, the source of that oppression.

QUESTIONS FOR REFLECTION

1. What is ecological feminism?
2. What role does a logic of domination play in ecofeminism? What assumptions do those who draw moral distinctions between humans and nonhumans need to make?
3. What connects the domination of nature to the domination of women?
4. How does ecological feminism seek to overcome the domination of nature?
5. Stroup, Baden, and Fractor and Warren disagree sharply about a number of issues. Which disagreements are fundamental? How might Stroup, Baden, and Fractor critique Warren’s view?
6. Compare ecofeminism to deep ecology. How are they similar? Where do they diverge?
